

universal handrail fixing kit

The Universal Handrail Fixing Kit has been developed to overcome a number of problems encountered with previous handrail bolts and brackets. It replaces and supersedes bottom brackets, top brackets and landing brackets. The use of the system avoids the need for mortise and tenon joints and allows the installer to fix newel posts prior to handrail installation. The Universal Kit is particularly useful when the handrail must slope at a non-standard angle. The Kit comprises a square handrail plate and a newel post fixing bolt.
